25X1A5A1	2. Over the period of the last two years, this receiver has evolved from the concept of an antenna with built-in receiver to its present form of a miniature, tunable VHF receiver. It was in this latest form that the sponsoring division (SP/EA) requested the Engineering Division to obtain a suitable contractor. The award, made to the calls for a 6 month delivery of the first engineering model.		
	given to the method of were able to start we proceed. At the mome 3 tuned passive stage probably be done with concentric design.	to the award, considerable thought had been of approach, consequently the design engineer ork immediately upon receipt of authority to ent, the receiver front end will consist of as working into a crystal mixer. Tuning will have a ganged Phillips trimmer condensers of Tests to date indicate the system will have to and the proper image and IF rejection.
